Dear Sir or Miss,

I came across your advertisement on the opportunities portal of AIESEC and I am interested in the role you offer as a PHP software engineer within the company Validaide since I had the occasion in the past to work with PHP in a company specialized in logistics.

It is my pleasure to present myself to one of AIESEC opportunities in the Netherlands and to a Dutch company such as Validaide.

I am Malek Zarkouna a graduating student in software engineering from the École Supérieure Privée d'Ingénierie et de Technologies - ESPRIT, of Tunisia.

I am taking part of a five-year program in purpose to obtain the national engineering degree in Computer Science.

During the last two years, I had the opportunities to go through several academic projects and internships. In most of them, I had to put in practice my knowledge of the agile scrum methodology, the requirements specification and analysis, and the object oriented design using the UML language.

I had to use PHP, HTML, CSS, JavaScript and SQL languages and I had also to learn about the PHP frameworks: Symphony and Doctrine, the front-end framework Bootstrap and the code quality inspection tool SensioLabsInsight.

I am very interested in the field of logistics since I had the opportunity to participate in the development of a web application for one of the leading logistics companies in Tunisia.

Dealing with topics related to transportation logistics helped me to discover the approaches in use, to understand the business logic and to acquire the best practices of this field of application.

Dynamism, enthusiasm and perseverance are the qualities that I would not hesitate to put at the company disposal in purpose to take the future challenges.

I would welcome an opportunity to discuss my technical capabilities with you.

Thank you for your time and consideration.

Sincerely yours,

Malek Zarkouna
